

## Dry cell battery poisoning:

Dry cell batteries are a common type of power source. Tiny dry cell batteries are sometimes called button batteries.

This article discusses the harmful effects from swallowing a dry cell battery (including button batteries) or breathing in large amounts of dust or smoke from burning batteries.

## Bathroom poisons:

Put the following items out of reach and/or in a bathroom cabinet that you can lock, because these can all be harmful to your child:

bathroom, shower or tile cleaners  
deodorants  
lipsticks and other make-up, including facial toner and nail polish remover  
medicines  
moisturizers and gels  
mouthwash, perfume, hand sanitizer and aftershave – these can have a high percentage of alcohol  
shampoos, conditioners, soaps and body wash, especially those with food smells  
toilet cleaners – fluid and solid.  
Detergent pods

Items in the bedroom or family area that can poison include:

air fresheners  
alcohol  
bubble-blowing solution  
essential oils – for example, eucalyptus oil  
glues

Symptoms depend on what type of battery or item swallowed:

Decreased mental ability  
Irritation or burns in the mouth  
Muscle cramps  
Slurred speech  
Swelling of the lower legs, ankles, or feet  
Spastic walk  
Tremor  
Weakness

**Cacti** found mostly on the gentle slopes and plains near the Franklin Mountains. Be extra safe when hiking as you can encounter various cacti along the way.

Cacti are **NOT** poisonous to humans. The only time cacti are dangerous is if you eat them, which can cause **stomachaches and diarrhea**. Some people may have allergic reactions to the needles on cacti, so it's best to avoid touching or eating them.

## Datura Plant

They are dangerous to those who choose to ingest parts of them, such as might happen to those hoping for a hallucinogenic experience, or perhaps ingested some by accident .

If someone eats the seeds the following can happen: respiratory depression, arrhythmias, fever, delirium, hallucinations, anticholinergic syndrome, psychosis, and even death if taken internally.

As scary as it sounds some people do use it as a recreational drug, according to the internet.
