

FIRST: **SCAN** Driver's License or EMS Wristband to Initiate Case
(if not available, click NEW).

NEXT:

- ☐ Acuity
- ☐ Check Unknown for Names (if DL not scanned)
- ☐ Enter Age
- ☐ Gender

Take a minim of two pictures:

Front of monitoring showing vitals and EKG rhythm (if appropriate)

Drivers License or Patient Demographics from Tablet PCR (if DL not scanned)

Consider also taking pictures of 12-Lead, Insurance Card, and anything else to help paint a picture of the patient

NEXT:

- ☐ Select Patient Type
- ☐ Enter Chief Complaint - voice to text, NOT voice memo (aka audio button)
- ☐ Enter Destination and E.T.A.

EMS Minimum Report

The ABC's of: pulsara

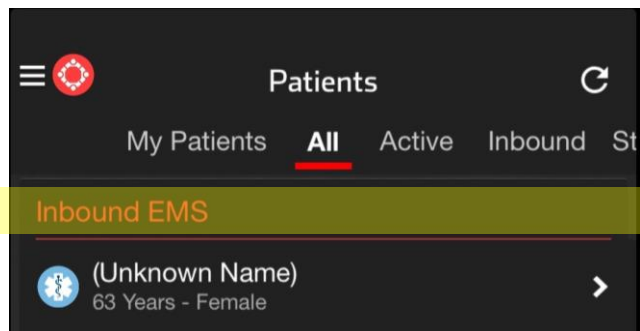

For the Hospital User

Version: October 2022

A Alert

Click on the **ALERT Banner** to answer the inbound EMS Alert

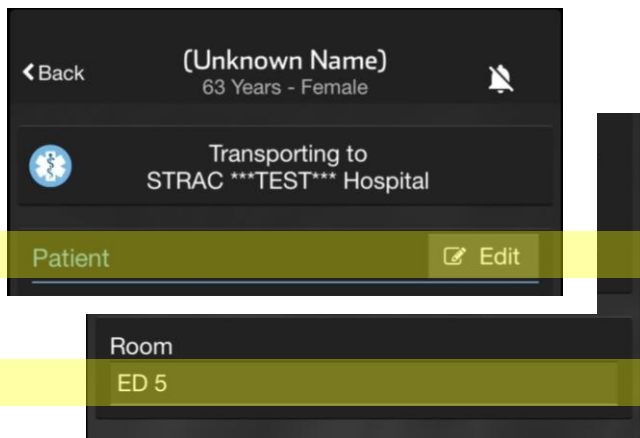

- ☐ This will automatically send a push notification to EMS to acknowledge the alert has been seen

B Bed

If a room assignment is available, click **Edit** next to the PATIENT section and input a room number

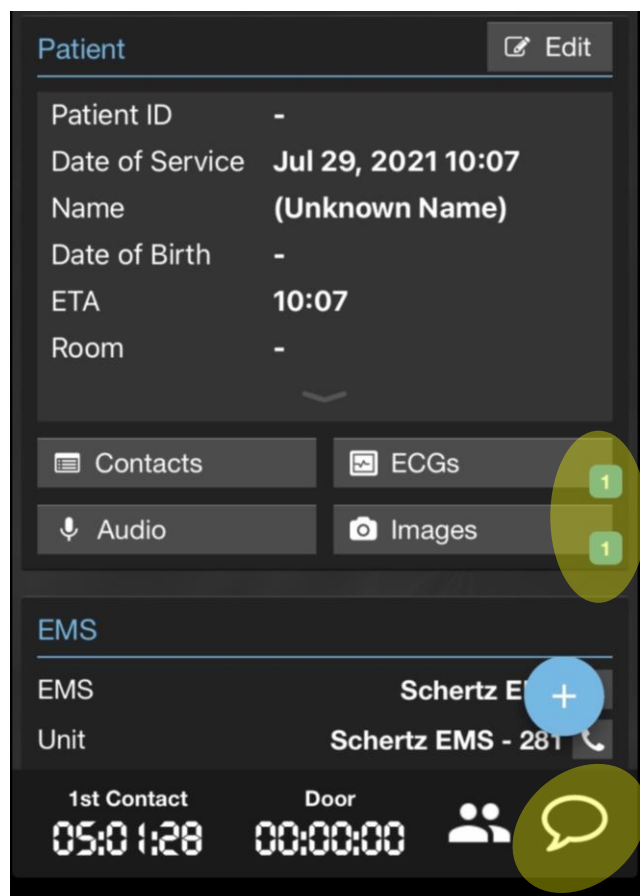

- ☐ This will automatically send a push notification to EMS with a room assignment

C Case

If you see a number at the bottom right-hand corner of the Contacts, Audio, ECGs or Images section there is something to view or listen to in these respective categories

- ☐ If absolutely necessary, the chat bubble at the bottom right-hand corner of the screen can be utilized for chat messages
- ☐ There should be NO expectation for EMS to respond to chat

IMPORTANT – the channel should be kept **OPEN** until EMS arrives. Pressing the STOP button prior to EMS arrival will initiate a push notification that the call has been canceled and may be misinterpreted.

The best practice is to STOP a case upon EMS arrival or periodically, unless the patient will be moving through a time sensitive emergency activation process such as STEMI, Stroke, Sepsis, etc.
